18 March 2005

Version
1.0

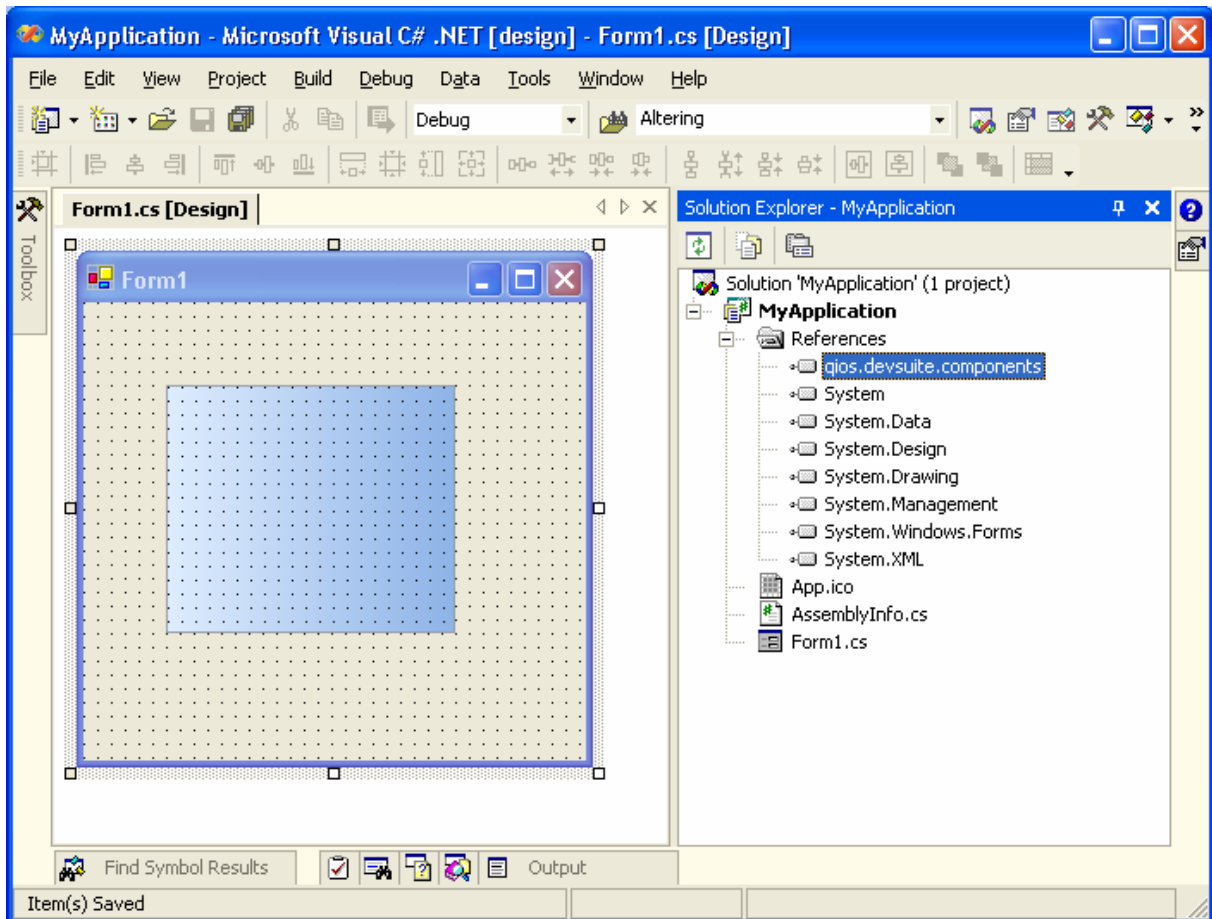

Redistribution

When you have obtained a valid license for Qios.DevSuite.Components, you are allowed to redistribute the applications you build with the library royalty free. The redistribution process is pretty straightforward. The only thing requested is that Qios.DevSuite.Components.dll is deployed in the same directory as your application file or is added to the Global Assembly Cache.

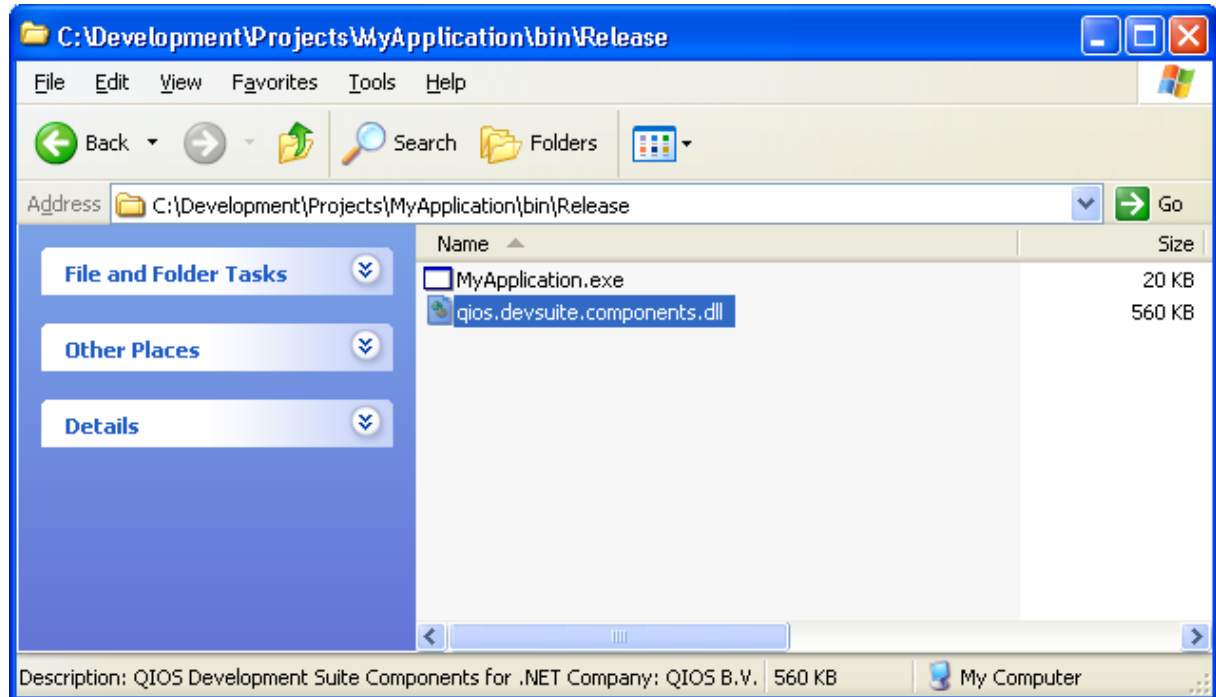

Reference

When you have started a new project and you add a Qios.DevSuite.Components control to your Form, Qios.DevSuite.Components is automatically referenced in your references list. Of course you can also manually select the Qios.DevSuite.Components into your references list. When this is done, it looks like this:

After you have built your application, Qios.DevSuite.Components.dll is automatically added to your project output, so it is listed near the MyApplication.exe file:

To redistribute your application you need to put Qios.DevSuite.Components.dll in the same folder. You can also put it in the Global Assembly Cache. Visit <http://msdn.microsoft.com> for more information on the Global Assembly Cache.

Remark

When you view the Qios.DevSuite.Components\Bin folder, you also see:

- Qios.DevSuite.Components.Installer.dll

You **don't** need to redistribute this file. This installer is only used to install Qios.DevSuite.Components on your development system.

License

When you have built an application having a valid Qios.DevSuite.Components license, this information is inserted into the application's .exe file. So no licenses or additional settings are needed for your application to run on another system.
